Tern added a lot this year.
Here's what's worth setting up.

New tools only help once they're set up for your trips. Most advisors don't have time to learn each one. I learn them, set them up, and hand you a short guide.

June 2026 · beta

AI that runs inside your automations

An automation can start an AI review on its own. For example, when a trip moves to Booked, Tern checks it for missing details.

I set up: An AI trip review on every trip that moves to Booked, with instructions in your words. It's in beta, so not every account has it yet.

July 2026

Trips that change status by themselves

Trips can move to Traveling on the day they leave, and to Traveled the day after they come home.

I set up: A status workflow for your booked trips. (Tern doesn't support this for group trips yet.) I fix the ones whose dates already passed.

March 2026

Emails that start the day you apply a workflow

A workflow can send an email the moment it's added, then another a set number of days later.

I set up: A welcome email on deposit day, then a reminder a few days later for the forms and details you still need.

June to October 2026

AI that writes in your voice

Tern's AI can write in your style, using a style guide saved in your settings. It can also write email templates and save them to your library.

I set up: Your writing style, built from your real emails, plus templates for the emails your clients get.

Updated February 2026

Inquiry forms that build the trip

When a client fills out a trip request form, Tern makes the contact and the trip. Your agency's terms show on the form automatically, with a time-stamped record of who agreed.

I set up: Your inquiry form, plus a new-lead workflow that starts the moment a request comes in.

July and October 2026

AI limits, and a Lite or Premium choice

AI use now has a monthly limit. Each AI automation can use Lite for simple jobs or Premium for bigger ones.

I set up: A check of every AI automation, set to the right level, so your monthly AI allowance lasts longer.

May and August 2026

Tasks for your assistant

Tasks inside a workflow can be assigned to a teammate. Assistants can be added as Collaborators who can run workflows.

I set up: Your assistant as a Collaborator, with their tasks assigned in each workflow. Needs an agency account and a Tern seat for them.

August 2026

Workflows that apply by trip type

Auto-apply can now tell regular trips from sub-trips. Tern asked advisors to go back and adjust their workflows.

I set up: Cleaner auto-apply settings, so group travelers don't get the wrong emails.

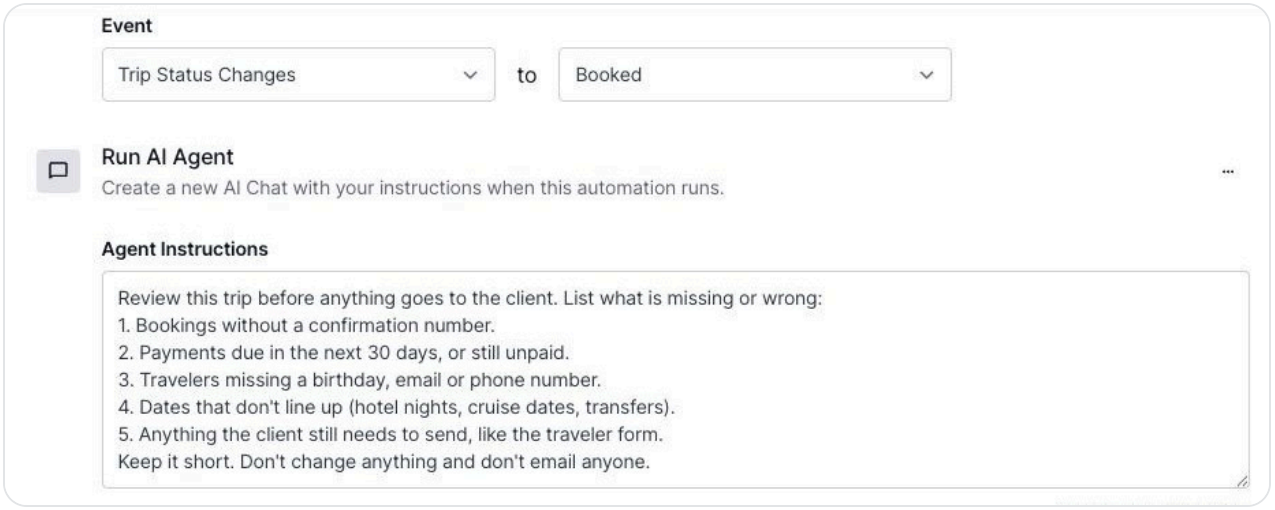

Already in my demo account.

My sample Cruise Trip workflow uses three of the new tools: automatic trip status, an AI trip review, and emails that start the day the workflow is added.

Automations

Name	Trigger	Trigger Actions	Status	Actions
Welcome email (day of deposit)	Immediately After Automation Added	Send email	Inactive	···
Final payment reminder (2 weeks before it is due)	104 days Before Trip Starts	Send email	Inactive	···
Documents ready (3 weeks before travel)	21 days Before Trip Starts	Send email	Inactive	···
Move to Traveling on day 1 of the trip	0 days After Trip Starts	Update trip	Inactive	···
Move to Traveled the day after the trip	1 days After Trip Ends	Update trip	Inactive	···
Welcome home (2 days after the trip)	2 days After Trip Ends	Send email	Inactive	···
AI trip review when a trip is booked	Immediately After Trip Status Changes	Run AI agent	Inactive	···

The workflow's automations. Every one stays off until you approve it.

The AI trip review: it runs when a trip moves to Booked, and only reports back. It doesn't change anything or email anyone.

Tern keeps changing. You don't have to.

Tern adds new features almost every week. When something new lands, I test it in my demo account first. Then I bring you only what saves you time. You approve every email before it goes live.

Start with a free 25-minute Scoping Call at eliavatravel.com. We talk about the trips you book most and which new tools fit them. Setup is part of a Set it up build.

Based on Tern's weekly product updates, January to October 2026. Features change often. Beta features may not be in every account yet.
